Career Objective

Computer Science (AIML) graduate (2027) with internship experience in NLP, time-series forecasting, and real-time fraud detection. Built production-style ML pipelines using LLMs, XGBoost, and GCP. Excited to join a collaborative team, tackle complex challenges, and deliver scalable AI/ML solutions that drive real impact.

Work Experience

Machine Learning Engineer Intern, MEDxAI, Chennai April 2025 – Aug 2025

- Built NLP + transformer-based feedback intelligence system, processing 10,000+ customer feedback entries monthly
- Developed LLM text classification pipelines (Hugging Face); deployed Flask + React apps with REST inference.
- Automated report categorization, cutting manual tagging time by ~40%.

Data Science Intern, Waisl, New Delhi May 2025 – June 2025

- Built time-series forecasting dashboard using Auto ARIMA + TBATS, improving prediction accuracy by 30%.
- Used Pandas, Matplotlib, Flask to visualize trends and enable data-driven decisions.
- Performed EDA to deliver actionable strategic insights.

Projects

FinSentinel – AI-Driven Stock Sentiment & Trading Signal System 2026

- Built an **end-to-end ML pipeline** processing **3M+ news articles** across 100 tickers using **FinBERT** for sentiment scoring and **XGBoost + LightGBM ensemble** achieving **54.2% accuracy** (vs. 33% baseline).
- Added **SHAP explainability** and an interactive **Streamlit dashboard** with full backtesting (Sharpe, Sortino, Calmar) — *Python, FinBERT, XGBoost, SHAP, Streamlit*.

CloudGuard – Serverless Data Quality Monitoring Platform 2026

- Built an event-driven pipeline where **S3 uploads trigger AWS Lambda** to compute a real-time data quality score, flagging anomalies across **50+ dataset attributes** in under **2 seconds**.
- Automated **SNS-based email alerts** for sub-threshold quality scores and used **CloudWatch** for pipeline monitoring, cutting manual data review time by **40%** — *AWS Lambda, S3, DynamoDB, SNS, CloudWatch, Amplify, IAM*.

Geometry & Distribution-Aware Learning for Multilingual Aspect-Based Sentiment Analysis 2026

- Designed a novel **multilingual sentiment architecture** preserving emotional geometry in embedding space using **contrastive supervision** (PyTorch, Transformers).
- Achieved **cluster-level F1 of 0.699** (Precision: 0.676, Recall: 0.744) on aspect-sentiment evaluation.

Education

VIT Chennai — BTech in Computer Science (AIML) CGPA: 8.74/10 July 2023 – May 2027

DAV Public School, Nerul Class 10: 97.8% April 2010 – Feb 2021

Skills

Languages: Python, SQL, Java, C++

ML & Time Series: XGBoost, LightGBM, Random Forest, Walk-Forward Validation, Feature Engineering, Auto ARIMA, TBATS, Forecasting

Deep Learning & NLP: PyTorch, TensorFlow, HuggingFace Transformers, BERT, FinBERT, LLMs, Sentiment Analysis, Contrastive Learning

Data & Cloud: GCP (Dataflow, Pub/Sub, BigQuery), ETL Pipelines, Terraform, GitHub Actions

Visualization & Tools: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, SHAP, Flask, Streamlit

Databases: SQL, MySQL, MongoDB

Leadership & Initiatives

Vice President, Place XP Club, VIT Chennai Jun 2025 – May 2026

- Led "Campus to Corporate" — coordinated 5 industry speakers for 200+ students; managed logistics, scheduling, and data-driven feedback analysis.
